

Dental Assisting National Board

in collaboration with

Certified in Dental Infection Prevention and Control (CDIPC)[®]

Exam Outline and Suggested References

The CDIPC exam assesses knowledge-based competence.

The purpose of the CDIPC exam is to ensure that individuals meet the minimum national standard for knowledge-based competence in dental infection prevention and control for the clinician. See dentalinfectioncontrol.org for CDIPC exam eligibility requirements.

Effective 05/14/2021

CDIPC

Exam Weighting by Domain

- I. Policies and Administrative Responsibilities (15%)
- II. Patient and Dental Health Care Provider Protection (25%)
- III. Environmental Asepsis and Disinfection (30%)
- IV. Sterilization and Instrument Processing (30%)

Exam Administration

Number of Multiple-Choice Questions	100
Time for Exam (minutes)	75
Time for Appointment (minutes)	80

The CDIPC exam is administered in-person and through live remote proctoring. The candidate may choose the method they prefer. Remote proctoring allows candidates to take exams using their own computer while being remotely monitored by webcam and microphone. Candidates will not receive an advantage based on their administration mode. That is, the remotely administered exam is not easier (or harder) than the in-person exam.

Overall performance on the exam determines the candidate's pass/fail status.

CDIPC Exam Outline

I: Policies and Administrative Responsibilities (15%)

A. Laws, rules, regulations, standards and guidelines as they apply to infection prevention and control, including but not limited to:

1. infection prevention and control policies and procedures.
2. infection prevention and control programs and compliance.
3. manufacturer's instructions for use and reuse of devices.
4. personal protective equipment (PPE).
5. Centers for Disease Control and Prevention (CDC) immunization for healthcare personnel.

B. Hazard communication standards as they relate to infection prevention and control practices and products, including but not limited to:

1. disinfection and sterilization chemicals.
2. safety data sheets.
3. regulated medical waste disposal.

C. Infection prevention and control supplies inventory.

II: Patient and Dental Healthcare Personnel Protection (25%)

A. Infection prevention and control concepts, including but not limited to:

1. chain of infection.
2. modes of infectious disease transmission.
3. transmission of emerging diseases.

B. Patient and dental healthcare personnel safety

1. Maintain aseptic conditions.
2. Standard precautions to prevent the spread of infectious diseases.
3. Patient clinical safety precautions, including safety eyewear.
4. Hand hygiene protocols based on procedure, including selection of product and duration.
5. Protect the patient and dental healthcare personnel by using PPE.
 - a. Select PPE for use based on task.
 - b. PPE protocols, including but not limited to:
 - i. donning.
 - ii. doffing.
 - iii. preparing for reuse.
 - iv. disposal.
6. Prevent backflow in low-volume evacuation.

C. Occupational exposure and safety

1. Protocols for exposure prevention and post-exposure management.
2. Sharps safety, including but not limited to:
 - a. engineering and work practice controls.
 - b. selection, evaluation and use of sharps safety devices.
 - c. safe injection practices.
3. Personnel work restrictions as they apply to medical conditions and work-related illnesses.

III: Environmental Asepsis and Disinfection (30%)

A. Infection prevention and control protocols to prevent cross-contamination.

B. Manufacturers' Instructions for Use (IFU).

C. Surface Asepsis

1. Procedures and preparation of products for cleaning/disinfection contaminated surfaces.
2. Use of surface barriers, including but not limited to:
 - a. selection.
 - b. placement.
 - c. removal and disposal.

D. Infection prevention and control protocols, including but not limited to:

1. radiography.
2. laboratory materials/equipment.
3. evacuation systems.
4. biological materials.
5. high-tech devices.
6. laser/electrosurgery plumes or surgical smoke.
7. oral surgical procedures.
8. technique for parenteral medications.

E. Dental unit water quality protocols, including but not limited to:

1. maintaining water quality.
2. monitoring and testing.
3. improvement methods.
4. use of sterile irrigation water.
5. boil-water advisories and procedures.

F. Incoming/outgoing lab cases and laboratory equipment processing protocols.

G. Disposal procedures, including but not limited to:

1. waste types.
2. disposable items.

IV: Sterilization and Instrument Processing (30%)

A. Sterilization/disinfection procedures based on Spaulding classifications.

B. Instrument processing procedures, including but not limited to:

1. preparing work area for reprocessing contaminated items.
2. transporting and receiving items.
3. cleaning and/or decontaminating items.
4. inspecting items for cleanliness and functionality.
5. following manufacturer's instructions for reprocessing items.
6. selecting packaging method and materials.
7. assembling, packaging and labeling items, including slow-speed/high-speed handpieces (with or without motors).
8. selecting and placing biological, chemical, and/or mechanical indicators.
9. loading and unloading sterilizer.
10. preparing work area for sterile storage.
11. storing and distributing sterile items to point-of-use.
12. immediate use sterilization.

C. Sterilization documentation.

1. Document sterilization load contents.
2. Record instrument processing in sterilization logbook.

D. Sterilization monitoring.

1. Package integrity (pre-sterilization, post-sterilization).
2. Sterilization failure and device malfunctions.
3. Output of sterilization tests and sign-off procedures.

CDIPC Exam Suggested References

DANB exam committees use the following textbooks and reference materials to develop this exam. This list does not include all available study materials; these are the resources that exam committees have determined provide the most up-to-date information needed to meet a determined level of competence on this exam. It is not an endorsement of the publications. Any one reference will likely not include all the study material required to pass the exam. **Please note that previous editions of the resources below may be used for study purposes if the previous version was published within the past 7 years, unless noted otherwise.**

The Certified in Dental Infection Prevention and Control (CDIPC)[™] exam is developed and administered by the Dental Assisting National Board (DANB). DANB exams are created using the exam outline, which is reviewed by subject matter experts including those from the fields of oral healthcare and dental infection prevention and control. The outline was developed using a content validation study (CVS), which included a job analysis survey where clinicians who perform dental infection prevention and control tasks were surveyed about how often tasks are performed and how critical competent performance of tasks is to the health and safety of the public and dental healthcare personnel. The Organization for Safety, Asepsis and Prevention (OSAP) Board of Directors and OSAP members participated in the CVS and development of this exam outline, which was reviewed and approved by DANB's Board of Directors.

State Regulations

Each state's dental board implements regulations and establishes rules for delegating legally allowable duties to dental assistants. Passing one or more of the DANB component exams or earning DANB certification only conveys authority to perform these duties in those states that recognize these exams or this certification as meeting state dental assisting requirements. This information is available at www.danb.org.
